

Key Points of my Research Paper

So basically, I am going to use the svm algorithm for this.

The news is fake or real will be detected. Then I will be doing dataset processing and EDA. Then a new file will be generated with the help of feature extraction and svm. Feature extraction will be done with the help of NLP. Once data is uploaded svm will work. The output will be shown with the help of graphs then we will be able to tell whether the news is fake or real. Working is yet to be performed. Just selected the dataset.
